REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The following is an examiner's statement of reasons for allowance: The prior art does not teach or fairly suggest the apparatus as recited in independent claim 1 of the instant invention comprising, *inter alia* an endoscopic fluid supply conduit system comprising a first fluid conduit extended from a manipulating head assembly and through the insertion tube toward an injection port provided on a distal end of an insertion tube; a second fluid conduit provided internally of a universal cable and communicable with the first fluid conduit; a fluid feed port having an axial receptacle bore, a first connection port formed at an inner axial end of the mouth piece for connecting the first fluid conduit in communication with the receptacle bore and a second connection port provided at one side of the mouth piece for connecting the second fluid conduit in communication with the receptacle bore; the first fluid conduit being extended linearly from the axial receptacle bore toward the insertion tube, while the second fluid conduit being inclined with respect to a longitudinal axis of the axial receptacle bore and a fluid supply adaptor having an axially extended fluid supply passage to be attached to a fluid feed member to feed a fluid under pressure to the first fluid conduit. Furthermore, communication between the first and second conduits is controlled (i.e. open or closed) by insertion of the fluid supply adaptor (closed) or a plug (open) into the mouthpiece.

Ishiguro et al. (U.S. Patent No. 5,871,441) disclose an endoscope having a channel switching device for use in switching over a suction channel. The endoscope

includes a first fluid conduit 83 (also referred to as 29 in Fig. 3), a second fluid conduit 82 (also referred to as 31 in Fig. 3), a fluid feed port 87 formed at the proximal side of the manipulating head assembly (see Col. 8, Lines 40-42) and a mouth piece 81 fixedly fitted in the fluid feed port (see Fig. 1 and Col. 8, Lines 42-49). Ishiguro et al. further disclose a fluid supply adaptor 51 having an axially extended fluid supply passage 59, a tip end 64 thereof being opened toward the first connection port and being adapted to be inserted into the mouth piece to block a fluid flow (via wall member 138) from the second fluid conduit to the first fluid conduit and to feed a fluid from the fluid supply passage to the first fluid conduit 83 (see Fig. 21 and Col. 10, Lines 40-50). Thus, communication between the first and second conduits is controlled by insertion of the fluid supply adaptor (closed) or a plug (open) into the mouthpiece. However, Ishiguro et al. are silent with respect to "the fluid supply adaptor having an axially extended supply passage to be attached to a fluid feed member (such as a syringe) to feed fluid under pressure to the first fluid conduit". The fluid supply adaptor 51 of Ishiguro et al. is merely used as a valve for opening and closing the suction channel (see Fig. 3) and does not enable connection to an additional fluid feed member while blocking communication between the first and second conduits, and thus fails to meet the limitations of the instant invention.

Akiba (U.S. Patent No. 6,425,535) discloses an endoscopic device having a first fluid supplying passage connected to a nozzle and a control-valve and a second fluid supplying passage connected to the jet spray aperture (see Fig. 1). A switching passage, formed in the pump connector, switches between positions wherein the nozzle

side passage is connected to or cut off from the valve side passage, depending on the state of the supplying passage. Akiba discloses an additional fluid supply means 18 to feed fluid under pressure to a conduit; however the syringe 18 provides fluid under pressure to a "third" conduit 16, and not a "first conduit" 12a as claimed in the instant invention (see Figs. 1 and 3-4). Akiba discloses a junction point of three conduits at a casing in a manipulating head assembly, whereas the instant invention provides communication (i.e. open/close) between two conduits via a fluid supply adaptor. The fluid conduits of Akiba are structurally dissimilar to those of the instant invention, as a third conduit 16 is provided for receiving the fluid from the additional fluid means 18, while blocking communication between the first and second conduits. Furthermore, the fluid feed port of Akiba is not formed at a proximal side of the manipulating head assembly, nor is the second fluid conduit formed at an incline with respect to a longitudinal axis of the receptacle bore. Thus, Akiba fails to meet the limitations of the instant invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
